

What Can Businesses Do?

- Use natural light wherever possible.
- Never intentionally break fluorescent light bulbs.
- Change your fluorescent bulbs to low-mercury bulbs. These bulbs contain less than half the mercury of a traditional fluorescent bulb. Phillips Lighting, GE Lighting, and Osram Sylvania all manufacture low-mercury fluorescent bulbs.
- Arrange for recycling of your spent fluorescent bulbs. Unbroken bulbs can be collected in special bins at your workplace and picked up for recycling. All parts of the bulb are recyclable, including the mercury, glass, and end caps. For more information contact Fluorescent Lamp Recyclers at 1-800-324-9018, or email dan@flr.ca.
